

Residents of the South Burnett

This is African boxthorn.

African boxthorn invades pastures and reduces profitability. It forms dense impenetrable, spiny thickets, which hinders stock mustering, accessibility, and bushwalking.

You can help stop the spread of this weed by:

1. Learning how to identify and control African boxthorn.
2. Checking your property for suspicious weeds.
3. Reporting any African boxthorn sighting to the South Burnett Regional Council on 07 41899100 or email: info@sbrc.qld.gov.au.

Let's eradicate African Boxthorn from the South Burnett Region.
